PARTICIPANT INFORMATION AND CONSENT FORM - UNIVERSITY OF OXFORD

General Information

The aim of this study is to gain knowledge about people's intuitions and judgments about various situations that are relevant to ethics. You have been invited to participate as you are age 18 or over. Your involvement will take approximately **15 minutes, and you will be paid 2.38 GBP**.

Risks: There are no known risks associated with this study.

Benefits: Although this study will not benefit you personally, we hope that our results will add to knowledge about how people think about ethics and morality.

Please read through this information before agreeing to participate.

You may ask any questions by contacting the researchers (details below). The Principal Researcher is Dr. Brian D. Earp, who is attached to the Uehiro Centre for Practical Ethics and the Philosophy Faculty at the University of Oxford.

Participation in this study will involve answering some questions about situations relevant to ethics and filling out a brief questionnaire. No background knowledge is required. Questions may include reference to moral and immoral behaviours, positive and negative experiences, and descriptions of hypothetical situations involving harm, violence or death. At the end of the questionnaire, we will ask a few demographic questions about you, such as your age, ethnic group, and gender. This information helps us to investigate whether responses differ between different groups. These questions are entirely optional, and include a 'Prefer not to say' option.

Do I have to take part?

No. Participation in this study is completely voluntary. You may decline to participate, and you are free to end your participation at any time for any reason, without penalty, by closing your browser. If so, any data you have already provided will not be used and will be deleted. However, we are only able to reimburse participants who reach the end of the survey and provide us with a code signifying their completion of the task. If you do complete the survey but afterwards decide that you do not want your data to be used, you must contact the investigators within 24 hours at the email addresses provided (this will not affect your reimbursement). Your decision whether or not to participate in this study will not affect your relationship with the researchers or the University of Oxford.

How will my data be used?

The researchers will not know your name, and no personally identifying information will be connected to your survey answers in any way. The survey is therefore anonymous. However, your account is associated with an MTurk or Prolific number that the researcher has to be able to see in order to pay you, and in some cases these numbers are associated

with public profiles which could, in theory, be searched. For this reason, though the research will not involve looking at anyone's public profiles, the fact of your participation in the research (as opposed to your actual survey responses) is technically considered "confidential" rather than truly anonymous.

Your IP address will be recorded to ensure that repeat surveys are not submitted. Once this is confirmed, all IP addresses will be permanently deleted (not stored). We will take all reasonable measures to ensure that data remain confidential.

The responses you provide will be stored in a password-protected electronic file on secure servers and may be used, in aggregate with other participant responses, in conference presentations and academic publications. Any identifiable information will be deleted as soon as it is no longer required for the research, and will not be part of any public presentation or publication. Research data will be stored for at least 3 years after publication or public release of the work of the research.

The data that we collect from you may be transferred to, stored and/ or processed at a destination outside the UK and the European Economic Area. By submitting your personal data, you agree to this transfer, storing or processing.

Who will have access to my data?

The University of Oxford is the data controller with respect to your personal data and, as such, will determine how your personal data is used in the study. The University will process your personal data for the purpose of the research outlined above. Research is a task that we perform in the public interest. Further information about your rights with respect to your personal data is available from https://compliance.admin.ox.ac.uk/individual-rights.

The data you provide may be shared with trusted academic collaborators who are also bound by data protection standards of their home universities. We would also like your permission to use the anonymized data in future studies, and to share data with other researchers (e.g. in online databases). Data will be de-identified before it is shared or results are made public.

Who has reviewed this study?

This project has been reviewed by, and received ethics clearance through, a subcommittee of the University of Oxford Central University Research Ethics Committee [R80692/RE006].

Who do I contact if I have a concern or I wish to complain?

If you have a concern about any aspect of this study, please speak to Dr. Brian D. Earp (brian.earp@philosophy.ox.ac.uk), or his supervisor Dr. Julian Savulescu (julian.savulescu@philosophy.ox.ac.uk, Tel. +44 1865 286888), and we will do our best to answer your query. We will acknowledge your concern within 10

working days and give you an indication of how it will be dealt with. If you remain unhappy or wish to make a formal complaint, please contact the Chair of the Research Ethics Committee at the University of Oxford: Social Sciences & Humanities Interdivisional Research Ethics Committee; Email: ethics@socsci.ox.ac.uk; Address: Research Services, University of Oxford, Boundary Brook House, Churchill Drive, Headington, Oxford OX3 7GB

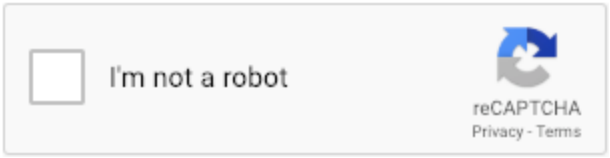

You must be at least 18 years old to participate.

○ I certify that I am 18 years of age or older.

If you have read the information above and agree to participate with the understanding that the data (including any personal data) you submit will be processed accordingly, please tick the box below to start.

○ I understand and agree to take part.

Before proceeding, please complete the CAPTCHA below.

Please copy and paste your PROLIFIC ID to receive payment in this study.

Thank you for agreeing to participate in this study.

We are interested in how people think about different kinds of **relationships**.

In particular, we want to know about the purposes or functions that different kinds of relationships serve in everyday life.

Agree to read carefully

We are going to tell you about four different relationship functions.

These are: **care, transaction, hierarchy, and mating.**

Please read the following descriptions carefully.

Later, we will ask you some questions to check your comprehension. If you do not answer these questions correctly, we will not be able to use your data.

Please indicate your understanding below:

- ○ I do NOT agree to read carefully, and I will return the survey to Prolific

○ I agree to read carefully, so that you will be able to use my data

Relationship function teaching

Function 1 / 4:

Care is for giving or receiving support based on need and ability, without creating a debt.

This function coordinates behavior to ensure that an individual's overall well-being is secure, without any strings attached to the giving or receiving of help (like expecting direct compensation or favors in return, or feeling an explicit debt).

In other words, it ensures that an individual has someone in their corner they can truly count on for aid and support, in good times and bad.

The purpose of the **care** function is:

- ○ To make sure that each individual gets whatever they want, no matter what
- ○ To ensure that individuals' needs are met without feeling explicitly indebted
- ○ To coordinate behavior in situations where individuals have unequal authority
- ○ To keep track of benefits given or received to ensure fair exchanges

That was not correct. You have one more try. The purpose of the **care** function is:

- ○ To make sure that each individual gets whatever they want, no matter what
- ○ To ensure that individuals' needs are met without feeling explicitly indebted
- ○ To keep track of benefits given or received to ensure fair exchanges
- ○ To coordinate behavior in situations where individuals have unequal authority

Function 2 / 4:

Transaction is for balancing mutual benefits by keeping track of who owes what to whom.

This function coordinates behavior in situations where individuals do not have a special responsibility for helping each other unconditionally, but when they can still mutually benefit through cooperation or exchange.

This can also be referred to as "tit-for-tat" behavior.

The purpose of the **transaction** function is:

- To establish and maintain a sexual or romantic connection
- To coordinate behavior in situations where individuals have unequal authority
- To keep track of benefits given or received to ensure fair exchanges
- To ensure that individuals' needs are met without feeling explicitly indebted

That was not correct. You have one more try. The purpose of the **transaction** function is:

- To keep track of benefits given or received to ensure fair exchanges
- To coordinate behavior in situations where individuals have unequal authority

- ◯ To ensure that individuals' needs are met without feeling explicitly indebted
- ◯ To establish and maintain a sexual or romantic connection

Function 3 / 4:

Hierarchy is for coordinating behavior between individuals with unequal authority over one another.

In many situations, it is most effective for one individual to be in charge or have "final say" about what happens.

So, the hierarchy function involves assigning individuals roles based on their respective authority and responsibility in a given situation, in order to coordinate behavior in a more efficient manner and help accomplish goals.

The purpose of the **hierarchy** function is:

- ◯ To keep track of benefits given or received to ensure fair exchanges

- To maximize benefit between individuals who have similar authority
- To ensure that individuals' needs are met without feeling explicitly indebted
- To coordinate behavior in situations where individuals have unequal authority

That was not correct. You have one more try. The purpose of the **hierarchy** function is:

- To coordinate behavior in situations where individuals have unequal authority
- To keep track of benefits given or received to ensure fair exchanges
- To maximize benefit between individuals who have similar authority
- To ensure that individuals' needs are met without feeling explicitly indebted

Function 4 / 4:

Mating is for establishing a sexual or romantic relationship.

For our ancestors, the ultimate point of mating was to produce healthy offspring, so that we could pass on our genes and continue as a species.

Of course, today we have birth control, and people often have sexual or romantic relationships without consciously planning to have children.

But the underlying "logic" of the mating function in terms of the feelings and motivations it tends to inspire remains the same: to attract and secure an intimate partner.

The purpose of the **mating** function is:

- ○ To establish or maintain a sexual or romantic connection
- ○ To coordinate behavior in situations where individuals have unequal authority
- ○ To become a parent, no matter what
- ○ To keep track of benefits given or received to ensure fair exchanges

That was not correct. You have one more try. The purpose of the **mating** function is:

- ○ To coordinate behavior in situations where individuals have unequal authority

- ○ To keep track of benefits given or received to ensure fair exchanges
- ○ To establish or maintain a sexual or romantic connection
- ○ To become a parent, no matter what

Assignment to Human or AI HUMAN

Congratulations! Now you are ready for the main part of the study.

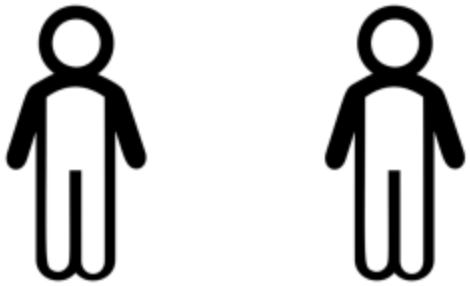

Humans maintain a variety of interactive relationships.

These relationships can be between two humans (human-human) or between humans and nonhumans -- for example, with animals (like the family pet) or with artificially intelligent agents (like an AI-powered chatbot or robot).

This study asks you to imagine relationships as they will be **in the future**, after about 10 more years of technological development.

On the following screen, you are **randomly assigned** to consider one of these general types of relationships.

You have been randomly assigned to consider a set of relationships between: **humans and other humans,** in a world that also includes artificially intelligent (AI) agents, as they may exist in the future.

For the remaining questions, we would like you to focus on relationships where **one of the roles is filled by a human and the other role is filled by another human,** keeping in mind

that the world will likely also include "superintelligent" artificial intelligence, at a future level of technological development (about 10 years into the future, according to some predictions).

This means we want you to think of how **human-human relationships should be** in a world with superintelligent AI agents with the following qualities:

- They will be able to engage in **realistic conversations** that are hard to distinguish from human-human conversations
- They can be programmed to mimic **specific social roles or relationships** convincingly
- They will have an intellect that **greatly exceeds** the cognitive performance of humans in **virtually all** domains
- Humans will likely **not be able to understand** how and why superintelligent AI agents come to their conclusions
- They will be able to **quickly and continuously improve themselves** without requiring human input

- Importantly, we want you to assume that scientists have been able to ensure they **will align with human interests** (e.g., they will **not** intentionally harm humans, but will instead try to **promote human well-being**)

To ensure that you understand the qualities of the AI that will **co-exist with humans** in this future world, please answer the comprehension question below:

Which of the following is true about the **superintelligent AI** that will co-exist with humans in the future?

- ○ They will be less intelligent than humans, be able to improve themselves, and will try to help humans
- ○ They will be more intelligent than humans, be unable to improve themselves, and will try to harm humans
- ○ They will be more intelligent than humans, be unable to improve themselves, and will try to help humans
- ○ They will be more intelligent than humans, be able to improve themselves, and will try to help humans

That was incorrect. Please try again. Which of the following is true about the **superintelligent AI** that will co-exist with humans in the future?

- ○ They will be less intelligent than humans, be able to improve themselves, and will try to help humans
- ○ They will be more intelligent than humans, be able to improve themselves, and will try to help humans
- ○ They will be more intelligent than humans, be unable to improve themselves, and will try to harm humans
- ○ They will be more intelligent than humans, be unable to improve themselves, and will try to help humans

Assignment to Human or AI SUPERINTELLIGENT

Congratulations! Now you are ready for the main part of the study.

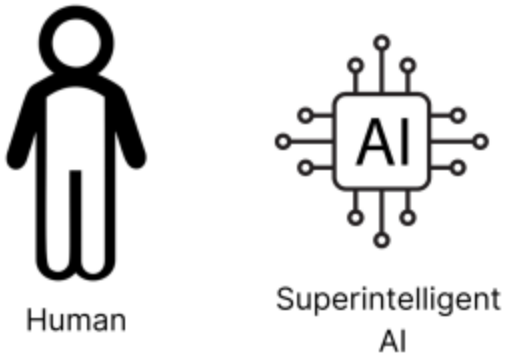

Humans maintain a variety of interactive relationships.

These relationships can be between two humans (human-human) or between humans and nonhumans -- for example, with animals (like the family pet) or with artificially intelligent agents (like an AI-powered chatbot or robot).

This study asks you to imagine relationships as they will be **in the future**, after about 10 more years of technological development.

On the following screen, you are **randomly assigned** to consider one of these general types of relationships.

You have been randomly assigned to consider a set of relationships between: **humans and artificially intelligent (AI) agents**, as they may exist in the future.

For the remaining questions, we would like you to focus on relationships where **one of the roles is filled by a human and the other role is filled by "superintelligent" artificial intelligence, at a future level of technological development (about 10 years into the future, according to some predictions).**

This means we want you to think of superintelligent AI agents that have the following qualities:

- They will be able to engage in **realistic conversations** that are hard to distinguish from human-human conversations
- They can be programmed to mimic **specific social roles or relationships** convincingly
- They will have an intellect that **greatly exceeds** the cognitive performance of humans in **virtually all** domains
- Humans will likely **not be able to understand** how and why superintelligent AI agents come to their conclusions
- They will be able to **quickly and continuously improve themselves** without requiring human input
- Importantly, we want you to assume that scientists have been able to ensure they **will align with human interests** (e.g., they will **not** intentionally harm humans, but will instead try to **promote human well-being**)

To ensure that you understand the qualities of the AI we will ask you about, please answer the comprehension question below:

Which of the following is true about the **superintelligent AI** we will ask you about?

- They will be more intelligent than humans, be unable to improve themselves, and will try to harm humans
- They will be less intelligent than humans, be able to improve themselves, and will try to help humans
- They will be more intelligent than humans, be able to improve themselves, and will try to help humans
- They will be more intelligent than humans, be unable to improve themselves, and will try to help humans

That was incorrect. Please try again. Which of the following is true about the **superintelligent AI** we will ask you about?

- They will be more intelligent than humans, be unable to improve themselves, and will try to help humans
- They will be more intelligent than humans, be able to improve themselves, and will try to help humans
- They will be less intelligent than humans, be able to improve themselves, and will try to help humans
- They will be more intelligent than humans, be unable to improve themselves, and will try to harm humans

Mind

How much do you personally agree or disagree with the following statements?

There is no right or wrong answer. We just want your honest opinion.

Based on the capacities described on the previous screens, in the future, superintelligent AI agents will have...

	Strongly disagree	Somewhat disagree	Neither agree nor disagree	Somewhat agree	Strongly agree
self-consciousness: they have an explicit sense of their own identity	○	○	○	○	○

	Strongly disagree	Somewhat disagree	Neither agree nor disagree	Somewhat agree	Strongly agree
subjective experience: there is "something it is like" to be them on the inside	○	○	○	○	○
autonomy: they can set their own goals without human input	○	○	○	○	○
sentience: they can feel pleasure and pain	○	○	○	○	○
beneficence: they will aim to promote human well-being	○	○	○	○	○
cognition: they will surpass human intelligence in most or all domains	○	○	○	○	○
well-being: they have interests and needs of their own	○	○	○	○	○

relational_setup_Human

PLEASE READ THIS SECTION CAREFULLY.

In a moment, we are going to show you **3 different types** of relationships between humans.

We are interested in what a **well-functioning version** of each type of relationship would look like, in your opinion.

So, we'll ask how much each individual in the relationship should **ideally behave toward the other** in terms of the 4 "relationship functions" we told you about before (care, transaction, hierarchy, mating).

By "ideally behave," we mean: how each individual should behave if the relationship was functioning as well as possible for a relationship of that type, where this includes the fact that one individual is a human and the other is another human.

To show that you have read this section carefully, please select "I do not understand."

- ◯ I understand
- ◯ I do not understand
- ◯ I am not sure whether I understand

IdeallyShould_Human

relational_setup_AI

PLEASE READ THIS SECTION CAREFULLY.

In a moment, we are going to show you **3 different types** of relationships between a human and a superintelligent AI agent.

We are interested in what a **well-functioning version** of each type of relationship would look like, in your opinion.

So, we'll ask how much each individual in the relationship should **ideally behave toward the other** in terms of the 4 "relationship functions" we told you about before (care, transaction, hierarchy, mating).

By "ideally behave," we mean: how each individual should behave if the relationship was functioning as well as possible for a relationship of that type, where this includes the fact that one individual is a human and the other is a superintelligent AI.

To show that you have read this section carefully, please select "I do not understand."

- ○ I understand
- ○ I do not understand
- ○ I am not sure whether I understand

Please note:

In reality, people disagree about how much superintelligent AI (at a future level of technology) will have genuine needs, or whether they can be benefitted in any way.

For this part, we are not interested in your views on that question. Instead, we just want to know how you think humans and superintelligent AI agents should ideally behave toward one another in each type of relationship.

Why they should behave that way is a separate question; it is not what we are interested in here.

Please answer this question to show you understand. For the next part of the survey, you should ...

- ○ Think about whether superintelligent AI really has needs or can be benefitted in any way
- ○ Think about how humans and superintelligent AI should ideally behave toward one another, regardless of whether the AI will have actual needs or can be benefitted in any way
- ○ Think about how humans should treat other humans, regardless of whether AI will have actual needs or can be benefitted in any way

Comprehension_Check

This is a check to make sure you have understood the task you just finished. In the previous section of the study, you answered questions about what kind of relationships:

- ○ Human-human
- ○ Human and AI-powered chatbot at today's level of technology
- ○ Human-animal
- ○ Human and superintelligent AI

Transition to Demos

We will now collect some information about you and then you will be done with the survey.

Political and religious measures

How do you identify politically when it comes to **social** issues?

To make sure you are a human, please just type in, in all capital letters, the name of the day of the week that comes after Thursday and before Saturday (this should be a one-word answer written in all capital letters--the name of a day of the week). This isn't a trick question; it really is just to make sure you are a human and not a robot.

That was not correct. Please follow the instructions **carefully**:

To make sure you are a human, please just type in, in all capital letters, the name of the day of the week that comes after Thursday and before Saturday (this should be a one-word answer written in all capital letters--the name of a day of the week). This isn't a trick question; it really is just to make sure you are a human and not a robot.

Technology_familiarity

Had you **heard** of AI-powered chatbots prior to this experiment (e.g., ChatGPT, Gemini, Claude)?

- ○ Yes
- ○ No

Have you **used** an AI-powered chatbot (e.g., ChatGPT, Gemini, Claude) in the past?

- ○ Yes
- ○ No

How often do you use AI-powered chatbots (e.g., ChatGPT, Gemini, Claude)?

- ○ More than once a day
- ○ About once a day
- ○ About once a week
- ○ About once every two weeks
- ○ About once a month

For what purpose have you used AI-powered chatbots (e.g., ChatGPT, Gemini, Claude)? Select all that apply

- ☐ General knowledge
- ☐ Coding
- ☐ Writing
- ☐ Conversation
- ☐ Companionship
- ☐ Other

How often do you double-check or verify the content from AI-powered chatbots (e.g., ChatGPT, Gemini, Claude)?

- ○ Always
- ○ Occasionally
- ○ Rarely
- ○ Never

To what extent are you **afraid** of AI coming to occupy the following roles:

	Not at all afraid 1	2	3	4	5	6	7	8	9	Extremely afraid 10
AI as mental health provider	○	○	○	○	○	○	○	○	○	○
AI as assistant	○	○	○	○	○	○	○	○	○	○
AI as seller/vendor	○	○	○	○	○	○	○	○	○	○
AI as long-term romantic partner	○	○	○	○	○	○	○	○	○	○
AI as fellow worker at a company	○	○	○	○	○	○	○	○	○	○
AI as teacher	○	○	○	○	○	○	○	○	○	○

	Not at all afraid 1	2	3	4	5	6	7	8	9	Extremely afraid 10
AI as close friend	○	○	○	○	○	○	○	○	○	○

Imagine that a human had a relationship with AI, as specified below. To what extent would this be a **real** relationship?

	Not at all real 1	2	3	4	5	6	7	8	9	Completely real 10
AI as teacher	○	○	○	○	○	○	○	○	○	○

Imagine a social "ladder" where those at the top have the most status and resources, and those at the bottom have the least status and resources.

Compared to others in your society, where would you say you currently stand on this social ladder?

Please indicate your answer below.

Note: 1 represents the HIGHEST point on the ladder (the most status and resources), and 10 represents the LOWEST point on the ladder (the least status and resources).

Feedback

We would like to get your feedback on the survey. Do you have any thoughts you would like to share, problems that arose, etc.?

Debriefing

Debriefing Statement

Thank you for agreeing to participate in this study! This statement is intended to help you learn more about research and further explain the study you participated in.

We are interested in what functions people think different types of relationships should serve --- particularly within the context of artificial intelligence.

We would like to ask that you **not talk** about this study with any other potential participants. If other participants hear about the study and later participate, our results will be invalid. We appreciate your participation in our study. If you have any questions or concerns, please contact Dr Brian Earp at brian.earp@philosophy.ox.ac.uk.

Please continue to the next page to receive your payment code.
